

PROJECT GUIDELINES

IMPORTANT: Before submission you should assemble a project directory which contains all your software, READMEs etc. and your project report (source files, word docs or pdf). Your source code should be documented well. Zip the project directory and name it in the following format:

Lastname1-Lastname2-Lastname3.rar

Also bring a hardcopy of your project when you submit it. Do not print the source code.

Title page

This should include the project title and the name of the authors.

Contents page

This should list the main sections of your report. Include page numbers indicating where each section begins.

Abstract

The abstract is a very brief summary of the report's contents. It should be about 50 to 200 words. The function of an abstract is to allow somebody have a good idea about your project after reading it.

Introduction

An introduction can be regarded as an expanded version of the abstract. It should begin with a clear statement of what the project is about. It should describe the project's topics and explain the problems being studied. It should explain the motivation: explain why the problems are interesting, what is expected from the studies. The introduction should also provide the reader with a summary of the remainder of the report.

Body of report

The central part of the report usually consists of sections detailing the technical work undertaken during the project. For each problem you should have a separate section. In each section explain the problem. You should also explain the software you have developed. Provide algorithms as pseudocodes and theoretical analysis of these algorithms. Also explain the experimental setup: how you test the algorithms. If you have encountered with some problems, explain how you have solved them. Compare theoretical and experimental results using tables and figures. Do not forget to explain them.

Conclusions and Future Work

It should include a concise statement of the report's important results and explanation of their significance. The project's conclusions should list the things which have been learnt as a result of the work you have done. Finish the report by listing studies to take the project further.

Bibliography

This consists of a list of all the books, articles, manuals etc. used in the project and referred to in the report.
